	AdMob Meditation

1 Introduction

This document aims to provide guidance for developers interested in integrating AdFalcon SDKs with AdMob Mediation.

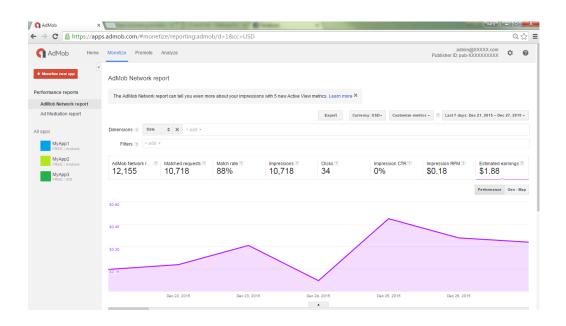

Requirements

- 1. An valid AdFalcon App/Site ID for AdFalcon app. The status of the app in AdFalcon should be "Active". Otherwise, AdFalcon will not return ads.
- 2. A valid AdMob Ad unit ID for AdMob app.
- 3. For iOS: AdFalcon iOS SDK v4.0.0 or above.
- 4. For Android: AdFalcon Android SDK v4.0.2 or above.

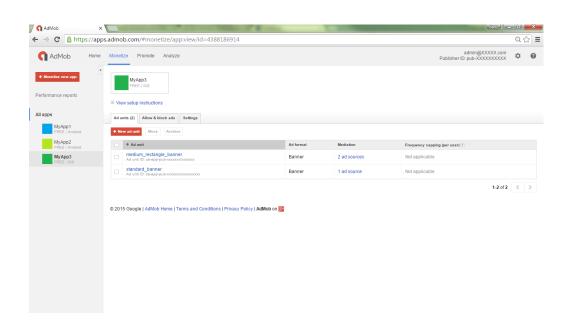

2 Configure AdMob Mediation to Use AdFalcon

- 1) Open AdMob website http://apps.admob.com.
- 2) Click on the "Monetize" tab.
- 3) From the left pane under "All apps", select the app you plan to integrate with AdFalcon.

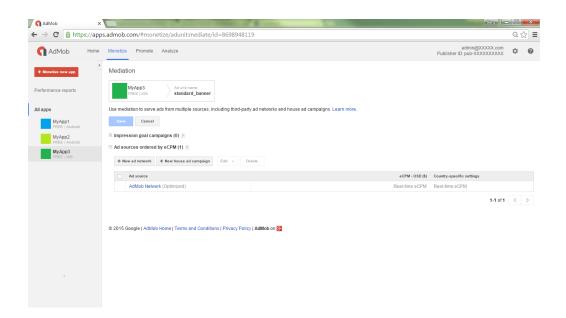

4) After selecting the app, you will see a table listing the ad units of the app as below:

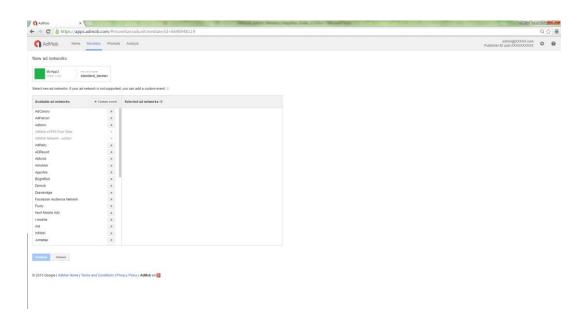

5) Under the "Mediation" column, click on the sources' link for the selected ad unit, the Mediation page will be displayed as below:

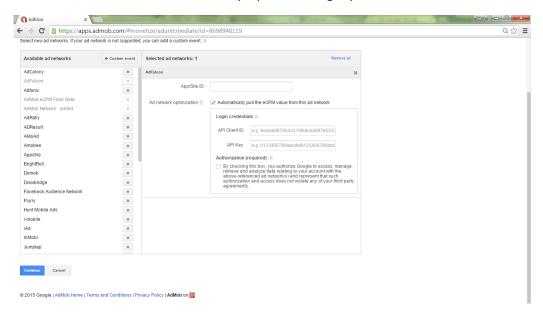

6) Click on "New ad network" button, a new page called "New ad networks" will be displayed as below:

7) From the left pane under "Available ad networks", select "AdFalcon".

Afterwards, AdFalcon's form will be displayed in the right pane as below:

- 8) fill your App/Site ID and optionally Ad network optimization info, then click on "Continue" to save your changes. You can obtain the API Client ID and API Key by contacting support@adfalcon.com.
- 9) After the mediation settings were saved successfully, AdFalcon ads will start running via the mediation in few hours.

3 SDK Integration Steps

Android

This section illustrates how to integrate AdFalcon Android SDK with AdMob Mediation in your app. The below instructions assume that you are using <u>Android Studio</u> and <u>Gradle</u>.

Step 1: Add AdMob SDK to your app

For more information, please check AdMob's guide:

https://firebase.google.com/docs/admob/android/quick-start

Step 2: Pull the AdFalcon SDK and Mediation Adapter via maven repository

a. Open your project's build.gradle, and update the "allprojects" block, as follows

```
allprojects {
    repositories {
        jcenter()
        maven {
            url "https://cdn01.static.adfalcon.com/sdk/android/maven"
        }
    }
}
```

b. Update the "dependencies" block of your module's build.gradle file, as follows:

c. Sync the project with Gradle files.

For more information about AdFalcon SDK, Please refer to http://www.adfalcon.com/en/download-sdk.html

Step3: Configure Proguard

To safely use Proguard with AdFalcon SDK, Google Mobile Ads and AdFalcon Mediation Adapter, add the following to your Proguard config:

```
-keep class com.noqoush.adfalcon.android.sdk.** {*;}
-keep class com.google.ads.mediation.adfalcon.** {*;}
-keep public class com.google.android.gms.ads.** {
    public *;
}
-keep public class com.google.ads.** {
    public *;
}
```

iOS

This section illustrates how to integrate AdFalcon iOS SDK with AdMob Mediation in your app.

Step 1: Add AdMob SDK to your app

For more information, please check AdMob's guide: https://firebase.google.com/docs/admob/ios/quick-start

Step 2: Add AdFalcon SDK v4.0.0 or above to your app

You don't need to add any code for AdFalcon SDK; Google Mobile Ads SDK will fetch and render the ads from AdFalcon network internally.

Visit the link below to find the instructions on how to add AdFalcon SDK http://www.adfalcon.com/en/download-sdk.html

Step 3: Download the iOS Mediation Adapter library and add the Adapter to your app The iOS mediation adapter requires AdFalcon iOS SDK v4.0.0 or above.

You will find the mediation adapter in the below link: http://www.adfalcon.com/en/adapters.html

AdMob Meditation

For more information on AdMob Mediation SDK please check the below links:

- iOS: https://developers.google.com/admob/ios/mediation
- Android: https://developers.google.com/admob/android/mediation
